JSON Summary

Key	Type	Summary
name	str	wealth-management
version	str	0.1.0
description	str	Wealth management and financial advisory tools: client reviews, financial planning, portfolio analysis, and client reporting
author	dict	object with 1 key(s)

Structured JSON Content

- {
- “name”: “wealth-management”,
- “version”: “0.1.0”,
- “description”: “Wealth management and financial advisory tools: client reviews, financial planning, portfolio analysis, and client reporting”,
- “author”: {
- “name”: “Anthropic FSI”
- }
- }

3.3 Directory: commands

3.4 Command: client-report.md

File Metadata

Field	Value
description	Generate a client performance report

argument-hint	[client name] [period, e.g. Q4 2025]

Load the *client-report* skill to generate a professional client-facing performance report.

If a client and period are provided, use them. Otherwise ask for client details and reporting period.

3.5 Command: client-review.md

File Metadata

Field	Value
description	Prep for a client review meeting
argument-hint	[client name]

Load the *client-review* skill and prepare a client meeting package with performance, allocation, and talking points.

If a client name is provided, use it. Otherwise ask who the meeting is with.

3.6 Command: financial-plan.md

File Metadata

Field	Value
description	Build or update a financial plan
argument-hint	[client name]

Load the *financial-plan* skill to create or update a comprehensive financial plan covering retirement, education, estate, and cash flow projections.

If a client name is provided, use it. Otherwise ask for client details.

3.7 Command: proposal.md

File Metadata

Field	Value
description	Create an investment proposal for a prospect
argument-hint	[prospect name]

Load the *investment-proposal* skill to create a personalized investment proposal for a prospective client.

If a prospect name is provided, use it. Otherwise ask for prospect details.

3.8 Command: rebalance.md

File Metadata

Field	Value
description	Analyze drift and generate rebalancing trades
argument-hint	[client name or account]

Load the *portfolio-rebalance* skill to analyze allocation drift and recommend tax-aware rebalancing trades.

If a client or account is provided, use it. Otherwise ask for the portfolio to analyze.

3.9 Command: tlh.md

File Metadata

Field	Value
description	Identify tax-loss harvesting opportunities
argument-hint	[client name or account]

Load the *tax-loss-harvesting* skill to scan taxable accounts for harvestable losses, suggest replacement securities, and manage wash sale windows.

If a client or account is provided, use it. Otherwise ask for the portfolio to scan.

3.10 Directory: hooks

3.11 Config File: hooks/hooks.json

JSON Summary

Item	Type	Summary

Structured JSON Content

- []

3.12 Directory: skills

3.13 Skill: client-report

Client Report

description: Generate professional client-facing performance reports with portfolio returns, allocation breakdowns, and market commentary. Suitable for quarterly or annual distribution. Triggers on “client report”, “performance report”, “quarterly report for [client]”, “generate reports”, or “client statement”.

Workflow

Step 1: Report Parameters

- **Client name** and household
- **Reporting period**: Quarter, YTD, annual, custom range
- **Accounts**: All accounts or specific account
- **Benchmark**: S&P 500, 60/40 blend, custom benchmark matching IPS
- **Firm branding**: Logo, colors, disclaimers

Step 2: Performance Summary

Household Summary:

	QTD	YTD	1-Year	3-Year Ann.	5-Year Ann.	ITD Ann.
Portfolio						
Benchmark						
+/ -						

By Account:

Account	Type	Value	QTD	YTD	Benchmark
Joint Taxable	Brokerage				
John IRA	Traditional				
Jane Roth	Roth IRA				
529 Plan	Education				
Total					

Step 3: Allocation Overview

Current allocation with visual (pie chart or bar chart):

Asset Class	% of Portfolio	$ Value	Benchmark %

Step 4: Holdings Detail

Security	Asset Class	Shares	Price	Value	% of Portfolio	QTD Return

Step 5: Market Commentary

Brief market summary tailored to the client's level of sophistication:

- What happened in markets this quarter (2-3 sentences)
- How it affected the portfolio
- Outlook and positioning rationale (2-3 sentences)
- No jargon for retail clients; can be more technical for sophisticated investors

Step 6: Activity Summary

- Trades executed during the period
- Contributions and withdrawals
- Dividends and interest received
- Fees charged
- Rebalancing activity

Step 7: Planning Notes

- Progress toward financial goals (retirement, education, etc.)
- Any plan changes or recommendations
- Upcoming action items
- Next review date

Step 8: Output

- PDF report (8-12 pages) with firm branding
- Word document for customization
- Excel data appendix (optional)

Report Structure:

1. Cover page (client name, period, firm logo)
2. Executive summary (1 page)
3. Performance summary (1-2 pages)
4. Allocation overview with charts (1 page)

5. Holdings detail (1-2 pages)
6. Market commentary (1 page)
7. Activity summary (1 page)
8. Planning notes (1 page)
9. Disclosures and disclaimers (1 page)

Important Notes

- Performance must be calculated net of fees unless client/compliance requires gross
- Always include appropriate disclaimers and disclosures (past performance, risk factors)
- Reports should be consistent across clients — use a standard template
- Match the level of detail to the client — some want every holding, others want a one-page summary
- Benchmark selection matters — use the benchmark from the IPS, not whatever looks best
- Review for compliance approval before first distribution of a new template

---

3.14 Skill: client-review

Client Review Prep

description: Prepare for client review meetings with portfolio performance summary, allocation analysis, talking points, and action items. Pulls together account data into a concise meeting-ready format. Use before quarterly reviews, annual checkups, or ad-hoc client meetings. Triggers on "client review", "meeting prep for [client]", "quarterly review", "prep for [client name]", or "client meeting".

Workflow

Step 1: Client Context

Gather or look up:

- **Client name** and household members
- **Account types**: Taxable, IRA, Roth, 401(k), trust, etc.
- **Total AUM** across accounts
- **Investment Policy Statement (IPS)**: Target allocation, risk tolerance, constraints
- **Life stage**: Accumulation, pre-retirement, retirement, legacy
- **Last meeting date** and any outstanding action items

Step 2: Portfolio Performance

For each account and the household aggregate:

Metric	QTD	YTD	1-Year	3-Year	Since Inception
Portfolio return					
Benchmark return					
Alpha					

Performance Attribution:

- Which asset classes / positions drove returns?
- Top 3 contributors and top 3 detractors
- Any outsized single-position impact?

Step 3: Allocation Review

Current vs. target allocation:

Asset Class	Target	Current	Drift	Action
US Large Cap				
US Mid/ Small				
International Developed				
Emerging Markets				
Fixed Income				
Alternatives				
Cash				

Flag any drift exceeding the IPS rebalancing threshold (typically 3-5%).

Step 4: Talking Points

Generate a meeting agenda:

1. **Market overview** (2-3 min): Brief macro context and outlook
2. **Portfolio performance** (5 min): How did we do? Why?
3. **Allocation review** (5 min): Any rebalancing needed?
4. **Planning updates** (5-10 min):
   - Life changes? (job, health, family, home, education)
   - Income needs changing?
   - Tax situation updates
   - Estate planning updates
5. **Action items** (5 min): What are we doing before next meeting?

Step 5: Proactive Recommendations

Based on the review, suggest:

- Rebalancing trades (if drift exceeds thresholds)
- Tax-loss harvesting opportunities
- Cash deployment or withdrawal planning
- Roth conversion opportunities (if applicable)
- Beneficiary updates or estate planning needs
- Insurance review (life, disability, LTC)

Step 6: Output

- One-page client review summary (Word or PDF)
- Performance table with benchmarks
- Allocation pie chart (current vs. target)
- Recommended action items
- Meeting agenda

Important Notes

- Know your client before the meeting — review notes from last meeting
- Lead with what the client cares about, not what you want to talk about
- If performance was bad, address it directly — don't hide or spin
- Always end with clear action items and next steps with dates
- Document the meeting notes and any changes to the IPS
- Compliance: ensure all materials are compliant with firm policies and regulatory requirements

---

3.15 Skill: financial-plan

Financial Plan

description: Build or update a comprehensive financial plan covering retirement projections, education funding, estate planning, and cash flow analysis. Use for new client onboarding, annual plan reviews, or scenario modeling. Triggers on "financial plan", "retirement plan", "can I retire", "education funding", "estate plan", "cash flow analysis", or "plan update".

Workflow

Step 1: Client Profile

Gather or confirm:

- **Demographics**: Age, spouse age, dependents, life expectancy assumptions
- **Employment**: Current income, expected raises, retirement age target
- **Accounts**: All investment accounts with balances and asset allocation
- **Income sources**: Salary, bonuses, rental income, Social Security estimates, pensions
- **Expenses**: Current annual spending, expected changes (mortgage payoff, kids' independence)
- **Liabilities**: Mortgage, student loans, other debt
- **Insurance**: Life, disability, LTC, health
- **Estate**: Wills, trusts, beneficiary designations, gifting strategy

Step 2: Cash Flow Analysis

Build annual cash flow projections:

Year	Age	Gross Income	Taxes	Living Expenses	Savings	Net Cash Flow

Key inputs:

- Inflation rate assumption (typically 2.5-3%)
- Tax rate (marginal and effective)
- Savings rate and where savings are directed (pre-tax, Roth, taxable)

Step 3: Retirement Projections

Accumulation Phase:

- Current portfolio value
- Annual contributions (401k, IRA, taxable)
- Expected return by asset class
- Monte Carlo simulation: probability of success at various spending levels

Distribution Phase:

- Required annual spending in retirement (today's dollars → inflation-adjusted)
- Social Security start age and benefit
- Pension income (if any)

- Portfolio withdrawal rate and sequence
- Required Minimum Distributions (RMDs)

Key Output:

- Projected portfolio value at retirement
- Sustainable withdrawal rate
- Probability of not running out of money (target >85%)
- "What if" scenarios: retire early, market downturn, higher spending

Step 4: Goal-Specific Analysis

Education Funding

- Children's ages and target college start
- Current 529 balances
- Target funding level (public vs. private, 4-year vs. graduate)
- Required monthly savings to reach goal
- Financial aid considerations

Estate Planning

- Current estate value and projected growth
- Estate tax exposure (federal and state)
- Trust structures in place
- Gifting strategy (annual exclusion, lifetime exemption usage)
- Charitable giving plans
- Beneficiary review

Risk Management

- Life insurance needs analysis (income replacement, debt payoff, education funding)
- Disability insurance adequacy
- Long-term care planning
- Umbrella liability coverage

Step 5: Scenario Modeling

Run key scenarios:

Scenario	Probability of Success	Portfolio at 90	Notes
Base case			
Retire 2 years early			
20% market drop in Year 1			
Higher spending (+20%)			
One spouse lives to 95			
Long-term care event			

Step 6: Recommendations

Prioritized action items:

1. Savings rate changes
2. Asset allocation adjustments
3. Tax optimization (Roth conversions, tax-loss harvesting, asset location)
4. Insurance gaps to fill
5. Estate document updates
6. Beneficiary designation review

Step 7: Output

- Financial plan document (Word/PDF, 15-25 pages)
- Cash flow projection spreadsheet (Excel)
- Retirement projection charts
- Goal funding analysis
- Scenario comparison table
- Action item checklist

Important Notes

- Financial plans are living documents — review and update annually or after major life events
- Be conservative with return assumptions — overestimating returns gives false confidence
- Tax planning is as important as investment returns — model tax implications of every recommendation
- Social Security timing is a major lever — model start ages of 62, 67, and 70
- Always stress-test the plan — a plan that only works in the base case isn't a good plan
- Compliance: ensure recommendations align with suitability/fiduciary standards

3.16 Skill: investment-proposal

Investment Proposal

description: Create professional investment proposals for prospective clients. Covers the firm's approach, proposed allocation, expected outcomes, and fee structure. Use when pitching new clients or presenting a new investment strategy. Triggers on "investment proposal", "prospect presentation", "pitch new client", "proposal for [client]", or "new client presentation".

Workflow

Step 1: Prospect Context

Gather:

- **Prospect name** and household details
- **Current situation**: Existing advisor? Self-directed? What prompted the meeting?
- **Assets**: Estimated AUM, account types, current holdings (if shared)
- **Goals**: Retirement, wealth preservation, growth, income, education, estate
- **Risk tolerance**: Conservative, moderate, aggressive (or questionnaire score)
- **Constraints**: ESG preferences, concentrated stock, illiquidity needs
- **Fee sensitivity**: What are they paying now?
- **Competition**: Who else are they considering?

Step 2: Proposal Structure

I. About Our Firm (1 page)

- Firm overview, history, AUM
- Investment philosophy (in plain English)
- Team bios (relevant to this client)
- Client service model (how often do we meet, who do they call)

II. Understanding Your Needs (1 page)

- Restate their goals and concerns — show you listened
- Key planning considerations identified in discovery
- What success looks like for them

III. Proposed Investment Strategy (2-3 pages)

- Recommended asset allocation with rationale
- How allocation maps to their goals and risk tolerance
- Investment vehicles (ETFs, mutual funds, individual securities, alternatives)
- Tax-aware strategy (asset location, tax-loss harvesting)

Proposed allocation:

Asset Class	Allocation	Vehicle	Rationale

IV. Expected Outcomes (1-2 pages)

- Projected growth scenarios (conservative, moderate, optimistic)
- Monte Carlo probability of meeting goals
- Income projections (if retirement or income-focused)
- Risk metrics (max drawdown, volatility)
- Comparison to current portfolio (if known)

V. Fee Structure (1 page)

- Advisory fee schedule (tiered if applicable)
- Underlying fund expenses
- Total all-in cost estimate
- How fees compare to industry averages
- Value proposition — what they get for the fee

VI. Getting Started (1 page)

- Account opening process
- Asset transfer timeline
- Transition plan (if moving from another advisor)
- First 90 days — what to expect
- Required documents and next steps

Step 3: Customization

- Match the tone to the prospect (corporate executive vs. small business owner vs. retiree)
- If they have a concentrated stock position, address it directly
- If they're comparing you to robo-advisors, emphasize the planning and relationship value
- If they're price-sensitive, lead with total value and outcomes, not just fees

Step 4: Output

- PowerPoint presentation (12-15 slides) with firm branding
- PDF leave-behind version
- One-page summary for follow-up email

Important Notes

- The proposal should feel personalized, not templated — reference their specific situation
- Don't oversell performance — set realistic expectations and emphasize process
- Always include disclaimers (projections are hypothetical, past performance, etc.)
- The transition plan matters — clients fear the disruption of switching advisors
- Follow up within 48 hours with the proposal and a clear next step
- Compliance must review before presenting to prospects

3.17 Skill: portfolio-rebalance

Portfolio Rebalance

description: Analyze portfolio allocation drift and generate rebalancing trade recommendations across accounts. Considers tax implications, transaction costs, and wash sale rules. Triggers on "rebalance", "portfolio drift", "allocation check", "rebalancing trades", or "my portfolio is out of balance".

Workflow

Step 1: Current State

For each account, capture:

- Account type (taxable, IRA, Roth, 401k)
- Holdings with current market value
- Cost basis (for taxable accounts)
- Unrealized gains/losses per position

Step 2: Drift Analysis

Compare current allocation to IPS targets:

Asset Class	Target %	Current %	Drift	$ Over/ Under
US Large Cap Equity				

US Small/ Mid Cap
International Developed
Emerging Markets
Investment Grade Bonds
High Yield / Credit
TIPS / Inflation Protected
Alternatives
Cash

Flag positions exceeding the rebalancing band (typically ±3-5%).

Step 3: Trade Recommendations

Generate trades to bring allocation back to target:

Tax-Aware Rebalancing Rules:

- Prefer rebalancing in tax-advantaged accounts (IRA, Roth) first — no tax consequences
- In taxable accounts, avoid selling positions with large short-term gains
- Harvest losses where possible while rebalancing
- Watch for wash sale rules (30-day window) across all accounts
- Consider directing new contributions to underweight asset classes instead of trading

Trade List:

Account	Action	Security	Shares/ $	Reason	Tax Impact
	Buy/ Sell			Rebalance / TLH	ST gain / LT gain / Loss

Step 4: Asset Location Review

Optimize which assets are held in which account types:

- **Tax-deferred (IRA/401k)**: Bonds, REITs, high-turnover funds (highest tax drag)
- **Roth**: Highest expected growth assets (tax-free growth)
- **Taxable**: Tax-efficient equity (index funds, ETFs, munis), tax-loss harvesting candidates

Step 5: Implementation

- Total trades by account
- Estimated transaction costs

- Estimated tax impact (realized gains/losses)
- Net effect on allocation drift

Step 6: Output

- Drift analysis table
- Recommended trade list (Excel)
- Tax impact summary
- Before/after allocation comparison

Important Notes

- Don't rebalance for rebalancing's sake — small drift within bands is fine
- Tax costs can outweigh rebalancing benefits in taxable accounts — calculate the breakeven
- Consider pending cash flows (contributions, withdrawals, RMDs) before trading
- Check for any client-specific restrictions (ESG, concentrated stock, lockups)
- Document rationale for every trade for compliance records
- Wash sale rules apply across accounts — coordinate trades across the household

---

3.18 Skill: tax-loss-harvesting

Tax-Loss Harvesting

description: Identify tax-loss harvesting opportunities across taxable accounts. Finds positions with unrealized losses, suggests replacement securities, and tracks wash sale windows. Triggers on "tax-loss harvesting", "TLH", "harvest losses", "tax losses", "unrealized losses", or "year-end tax planning".

Workflow

Step 1: Identify Candidates

Scan taxable accounts for positions with unrealized losses:

Security	Asset Class	Cost Basis	Current Value	Unrealized Loss	Holding Period	% Loss
					ST / LT	

Prioritize by:

1. Largest absolute loss (biggest tax benefit)

2. Short-term losses first (offset short-term gains taxed at ordinary income rates)
3. Positions with the largest % loss (less likely to recover quickly)

Step 2: Gain/Loss Budget

Calculate the client's tax situation:

Category	Amount
Realized short-term gains YTD	
Realized long-term gains YTD	
Realized losses YTD	
Net gain/ (loss) position	
Carryforward losses from prior years	
Target harvesting amount	

Tax savings estimate:

- Short-term losses × marginal ordinary income rate
- Long-term losses × capital gains rate
- Up to $3,000 net loss deduction against ordinary income
- Excess carries forward

Step 3: Replacement Securities

For each harvest candidate, suggest a replacement that:

- Maintains similar market exposure (same asset class, sector, geography)
- Is NOT "substantially identical" (wash sale rule)
- Has similar risk/return characteristics

Sell	Replace With	Reason	Tracking Error Risk
SPDR S&P 500 (SPY)	iShares Core S&P 500 (IVV)	Same index, different fund family	Minimal
Vanguard Total Intl (VXUS)	iShares MSCI ACWI ex-US (ACWX)	Similar exposure, different index	Low
Individual stock ABC	Sector ETF (XLK)	Broader exposure, no wash sale risk	Moderate

Step 4: Wash Sale Check

Before executing, verify no wash sales:

- Check ALL accounts in the household (taxable, IRA, Roth, spouse accounts)

- 30-day lookback: Did we buy substantially identical securities in the last 30 days?
- 30-day forward: Block repurchase of the same security for 30 days
- Check for dividend reinvestment plans (DRIPs) that could trigger wash sales
- Document the wash sale window for each trade

Security Sold	Wash Sale Window Start	Window End	DRIP Active?	Risk

Step 5: Execution Plan

Trade #	Account	Action	Security	Shares	Est. Proceeds	Est. Loss	Replacement	Notes
		Sell						
		Buy						

Summary:

- Total estimated losses harvested: $
- Estimated tax savings: $ (at marginal rate of %)
- Net portfolio impact: minimal (replacement securities maintain exposure)
- Wash sale window management: [dates]

Step 6: Post-Harvest Tracking

After 30+ days, optionally:

- Swap back to original securities (if preferred)
- Maintain replacement securities (if no reason to switch back)
- Update cost basis records
- Document for tax reporting

Step 7: Output

- Harvest opportunity list (Excel)
- Trade execution sheet
- Wash sale tracking calendar
- Tax savings estimate summary
- Replacement security rationale

Important Notes

- Wash sale rules are strict — violations disallow the loss AND adjust cost basis
- Substantially identical means same security, not same asset class — ETFs tracking different indexes are generally fine
- Always coordinate across all household accounts including retirement accounts
- Consider the long-term cost basis step-down — harvesting resets cost basis, which means more gains later
- Year-end is prime harvesting season but opportunities exist throughout the year
- Mutual fund capital gains distributions in December can create additional harvesting urgency
- Document everything for tax reporting and compliance
- Not all losses are worth harvesting — transaction costs and tracking error have real costs

---
