1 Executive Brief

Date: May 12, 2026

1.1 What changed on May 5, 2026

Anthropic materially expanded its public financial-services reference offering on May 5, 2026. The change is not just new marketing language. The public package now combines:

- Ten ready-to-run named agent templates
- Seven vertical or shared workflow plugins
- Ten managed-agent cookbooks for headless deployment
- A Microsoft 365 add-in provisioning tool
- A broader partner and connector story than the one exposed in the older vertical-only marketplace

The announcement also anchors the release to a specific execution model:

- Plugins for Claude Cowork and Claude Code
- Cookbooks for Claude Managed Agents
- Cross-application work in Excel, PowerPoint, Word, and Outlook
- More governed access to external financial data and internal systems

1.2 Why it matters for this repo

This local repo still represents the earlier shape of the marketplace: five workflow plugins plus two partner-built plugins, with no named agents, no managed-agent cookbooks, and no Microsoft 365 deployment tooling.

That means the repo is still useful as a vertical skill bundle, but it no longer matches Anthropic’s latest public reference architecture.

1.3 Headline findings

- The shared connector baseline is still aligned. Both repos expose the same 11 shared MCP servers in the `financial-analysis` core plugin.
- The architectural surface is no longer aligned. Anthropic now ships a dual-surface model: reusable vertical plugins plus self-contained named agents.
- The largest gaps are not in investment-banking or equity-research prompts. They are in packaging, orchestration, and finance-ops coverage.
- The biggest missing capability areas are `fund-admin`, `operations`, managed-agent cookbooks, and self-contained agent wrappers.

- Anthropic’s article announces additional ecosystem partners and a Moody’s MCP app, but those additions are not yet represented in the inspected open repo manifests as of May 12, 2026.

1.4 Quantitative snapshot

Metric	Local repo	Anthropic upstream
Vertical plugins	5	7
Named agent plugins	0	10
Partner-built plugins	2	2
Managed-agent cookbooks	0	10
Total commands	47	47
Total skills	53	117
Shared MCP connectors	11	11
Microsoft 365 install tooling packages	0	1

The command count staying flat while the skill count more than doubles is important. Anthropic added depth, packaging, and automation surfaces rather than simply adding more slash commands.

1.5 Immediate implication

If the goal is to keep this repo current relative to Anthropic’s May 2026 financial-services release, the next update should prioritize structure and deployment surfaces before prompt polishing:

1. Add the missing verticals and missing shared skills.
2. Introduce self-contained named agent plugins.
3. Add managed-agent cookbooks that point to the same source prompts.
4. Decide whether this repo also wants Microsoft 365 deployment tooling or only the workflow content.
