1 Local vs Upstream Gap Analysis

Date: May 12, 2026

1.1 Scope

This report compares:

- Local repo: /Users/cui/Documents/GitHub/financial-services-plugins
- Upstream reference: anthropics/financial-services, inspected on May 12, 2026

The comparison focuses on repository structure, plugin surface area, skill coverage, and packaging model.

1.2 Top-Level Structure

Category	Local repo	Upstream repo	Gap
Marketplace name	financial-services-plugins	claude-for-financial-services	Naming and positioning diverged
Vertical plugin folders	Flat at repo root	Nested under plugins/vertical-plugins/	Structural divergence
Agent plugin folders	None	plugins/agent-plugins/	Missing
Managed-agent cookbooks	None	managed-agent-cookbooks/	Missing
Microsoft 365 installer	None	claude-for-msft-365-installer/	Missing
Shared connector ownership	financial-analysis/.mcp_plugins/vertical-plugins/	financial-analysis/.mcp_plugins/vertical-plugins/	Equivalent

1.3 Inventory Comparison

Metric	Local repo	Upstream repo
Vertical plugins	5	7

Metric	Local repo	Upstream repo
Agent plugins	0	10
Partner-built plugins	2	2
Total commands	47	47
Total skills	53	117
Shared connectors	11	11

1.4 Vertical Coverage

Workflow area	Local status	Upstream status	Notes
Financial analysis	Present	Present	Local version is thinner on background skills
Investment banking	Present	Present	Broadly aligned
Equity research	Present	Present	Broadly aligned
Private equity	Present	Present	Local version lacks ai-readiness
Wealth management	Present	Present	Broadly aligned
Fund administration	Missing	Present	Entire vertical missing locally
Operations / KYC	Missing	Present	Entire vertical missing locally
Partner-built LSEG	Present	Present	Aligned
Partner-built S&P Global	Present	Present	Aligned

1.5 Skill-Level Gaps by Existing Vertical

1.5.1 Financial Analysis

The local `financial-analysis` plugin is the largest same-name surface that still materially differs.

Category	Local only	Upstream only
Commands	<code>3-statements</code> , <code>check-deck</code>	<code>3-statement-model</code>
Skills	<code>3-statements</code> , <code>check-deck</code> , <code>check-model</code>	<code>3-statement-model</code> , <code>audit-xls</code> , <code>clean-data-xls</code> , <code>deck-refresh</code> , <code>ib-check-deck</code> , <code>pptx-author</code> , <code>xlsx-author</code>

Interpretation:

- Anthropic moved toward richer spreadsheet and presentation production or audit skills.
- Some local skills appear to have been renamed or split into narrower upstream variants.
- The upstream version relies more heavily on non-command utility skills that agents can call behind the scenes.

1.5.2 Private Equity

Difference	Status
ai-readiness command	Missing locally
ai-readiness skill	Missing locally

Everything else in private equity is structurally aligned.

1.5.3 Investment Banking, Equity Research, Wealth Management

These three verticals are largely aligned at the command and skill naming level. The bigger gap is not prompt coverage. The gap is that upstream Anthropic now packages those skills into named end-to-end agents and managed-agent cookbooks.

1.6 Named Agent Layer Missing Locally

Upstream Anthropic adds ten self-contained agents that bundle skills from the verticals into workflow-specific operating packages.

Upstream agent	Primary outcome	Skills bundled upstream	Closest local building blocks
pitch-agent	Build branded pitch materials end to end	comps-analysis, dcf-model, lbo-model, pitch-deck, deck-refresh, pptx-author, xlsx-author and others	financial-analysis + investment-banking
meeting-prep-agent	Produce pre-meeting client briefing packs	client-review, client-report, investment-proposal, pptx-author	wealth-management
market-researcher	Sector primer, landscape, comps, shortlist	sector-overview, competitive-analysis, comps-analysis, idea-generation, pptx-author	financial-analysis + equity-research
earnings-reviewer	Earnings transcript to model update to note	earnings-analysis, earnings-preview, model-update, morning-note, audit-xls, xlsx-author	equity-research + financial-analysis
model-builder	Build Excel-based valuation models	3-statement-model, dcf-model, lbo-model, audit-xls, xlsx-author	financial-analysis

Upstream agent	Primary outcome	Skills bundled upstream	Closest local building blocks
valuation-reviewer	Review GP valuation packages	ic-memo, portfolio-monitoring, returns-analysis, xlsx-author	private-equity
gl-reconciler	Reconcile GL and trace breaks	gl-recon, break-trace, audit-xls, xlsx-author	Missing local vertical support
month-end-closer	Close support and commentary	accrual-schedule, roll-forward, variance-commentary, audit-xls, xlsx-author	Missing local vertical support
statement-auditor	Audit LP statements before distribution	nav-tieout, audit-xls, xlsx-author	Missing local vertical support
kyc-screener	Parse onboarding docs and rules	kyc-doc-parse, kyc-rules, xlsx-author	Missing local vertical support

1.7 Managed-Agent Packaging Gap

The upstream repo ships ten managed-agent-cookbooks/<slug>/ packages. Each cookbook includes:

- agent.yaml
- steering-examples.json
- Per-agent deployment README
- A subagent structure for depth-1 delegation

This is a meaningful product surface, not just documentation. It lets the same workflow run as a deployed managed agent instead of only as a local plugin.

The local repo currently has no equivalent.

1.8 Conclusions

- Local prompt coverage is strongest where the old marketplace was already mature: investment banking, equity research, private equity, and wealth management.
- The local repo is most outdated where Anthropic shifted from vertical bundles to end-to-end workflow agents.
- Connector parity remains strong, which means the local repo can probably be modernized without rethinking the shared data-provider baseline.
- The most strategic missing pieces are fund-admin, operations, and the agent-plus-cookbook packaging pattern.
