1 Connector and Partner Update

Date: May 12, 2026

1.1 Shared Connector Baseline

The local repo and the inspected upstream Anthropic repo still expose the same 11 shared MCP connectors in the `financial-analysis` core plugin.

Provider	Present in local <code>.mcp.json</code>	Present in upstream <code>.mcp.json</code>
Daloopa	Yes	Yes
Morningstar	Yes	Yes
S&P Global	Yes	Yes
FactSet	Yes	Yes
Moody's	Yes	Yes
MT Newswires	Yes	Yes
Aiera	Yes	Yes
LSEG	Yes	Yes
PitchBook	Yes	Yes
Chronograph	Yes	Yes
Egnyte	Yes	Yes

Result: the open repo manifests still share a stable 11-connector baseline as of May 12, 2026.

1.2 What the May 5, 2026 Article Adds

Anthropic's announcement expands the ecosystem story beyond those 11 manifest entries.

1.2.1 Newly announced connectors

Provider	Announced role
Dun & Bradstreet	Verified business identity and enterprise record-linking for AI workflows

Provider	Announced role
Fiscal AI	Real-time public-equity fundamentals and benchmarking
Financial Modeling Prep	Quotes, fundamentals, statements, filings, and transcripts across multiple asset classes
Guidepoint	Compliance-reviewed expert interview transcripts
IBISWorld	Industry revenue, ratios, cost structures, risk scores, and forecasts
SS&C Intralinks	DealCenter AI data rooms, diligence Q&A, and deal-activity tracking
Third Bridge	Primary-source expert interviews across companies, sectors, and value chains
Verisk	Insurance underwriting, claims, and risk-analysis data

1.2.2 Newly announced MCP app

Provider	Announced role
Moody's MCP app	Interactive use of proprietary credit ratings plus data on 600M+ public and private companies

1.3 Important Current-State Observation

As of May 12, 2026:

- The article names these additional partners.
- The upstream open-source repo still exposes the original 11 shared connectors in `financial-analysis/.mcp.json`.
- I did not find the newly announced provider names in the inspected upstream marketplace manifests or connector JSON files.

That means the public article is ahead of the open repo manifests on partner-surface disclosure.

1.4 Practical Implications for This Repo

The connector roadmap now splits into two layers:

1.4.1 Layer 1: Baseline shared connector stack

This repo is already aligned on the open manifest baseline. No immediate connector replacement is required to match the upstream repo's checked-in `.mcp.json`.

1.4.2 Layer 2: Emerging ecosystem additions

These newly announced partners map cleanly to workflow gaps in the local repo:

Partner	Most relevant workflow area	Why it matters
Dun & Bradstreet	Operations / KYC	Strong fit for entity verification and onboarding

Partner	Most relevant workflow area	Why it matters
Guidepoint	Equity research / private equity	Adds expert-call and transcript depth
Third Bridge	Equity research / private equity	Similar value for primary-source diligence
IBISWorld	Market researcher / sector work	Strong fit for industry-primer workflows
SS&C Intralinks	Investment banking / private equity	Strong fit for data-room and diligence workflows
Verisk	Insurance and risk operations	Opens a new workflow domain not covered in the local repo
Fiscal AI	Public-equity analysis	Lower priority if FactSet, S&P, and Daloopa already cover the use case
Financial Modeling Prep	Public-markets breadth	Useful for broader or lower-cost coverage cases
Moody's MCP app	Credit and compliance workflows	Especially relevant if this repo grows finance-ops and KYC surfaces

1.5 Recommendation

For this repo, the right connector move is staged rather than immediate:

1. Keep the 11 current shared connectors as the baseline because they still match the inspected upstream manifests.
2. Document the article-announced connector layer separately so readers do not assume the repo already exposes those partners.
3. Add new partner surfaces only when the related workflow packages also exist locally, especially fund-admin, operations, and any future credit or insurance workflows.
