3.3 File: earnings-reviewer/README.md

Earnings Reviewer — managed-agent template

Overview

Earnings call + filings → model update → note draft. Same source as the [earnings-reviewer](#) Cowork plugin — this directory is the Managed Agent cookbook for *POST /v1/agents*.

Deploy

Structured Template

- export ANTHROPIC_API_KEY=sk-ant-...
- export FACTSET_MCP_URL=... DALOOPA_MCP_URL=...
- ../../scripts/deploy-managed-agent.sh earnings-reviewer

Steering events

See [steering-examples.json](#). Fan out across a coverage list from your orchestration layer — one session per ticker.

Security & handoffs

Transcripts and press releases are untrusted. Three-tier isolation:

Tier	Touches untrusted docs?	Tools	Connectors
<i>transcript-reader</i>	Yes	<i>Read, Grep</i> only	None
<i>model-updater</i> / Orchestrator	No	<i>Read, Grep, Glob, Agent</i>	FactSet, Daloopa (read-only)
<i>note-writer</i> (Write-holder)	No	<i>Read, Write, Edit</i>	None

transcript-reader returns length-capped, schema-validated JSON. *note-writer* produces *./out/note-.docx* and the updated model at *./out/model-.xlsx*.

Handoff: to rebuild a DCF after an earnings-driven thesis change, emit a *handoff_request* for *model-builder*; *scripts/orchestrate.py* routes it as a new steering event.

3.4 Steering Examples: earnings-reviewer

JSON Summary

Item	Type	Summary
1	dict	object with 2 key(s)
2	dict	object with 2 key(s)
3	dict	object with 2 key(s)

3.10 File: gl-reconciler/README.md

GL Reconciler — managed-agent template

Overview

Finds breaks between general ledger and subledger for a trade date and set of asset classes, traces root cause, and produces an exception report for controller sign-off.

Same source as the [gl-reconciler](#) Cowork plugin — this directory is the Managed Agent cookbook for *POST /v1/agents*.

Deploy

Structured Template

- export ANTHROPIC_API_KEY=sk-ant-...
- export GL_MCP_URL=... # read-only GL MCP
- export SUBLEDGER_MCP_URL=... # read-only subledger MCP
- ../../scripts/deploy-managed-agent.sh gl-reconciler

Steering events

See [steering-examples.json](#). Kick a session with a trade date and asset-class list; follow-up events can re-trace a single break.

Security & handoffs

This agent reads counterparty/custodian statements — documents authored by outsiders that may carry adversarial instructions. The template is structured so a payload in one of those documents cannot reach a shell, a write tool, or a firm system:

Tier	Touches untrusted docs?	Tools	Connectors
<i>reader</i>	Yes	<i>Read, Grep</i> only	None
Orchestrator	No	<i>Read, Grep, Glob, Agent</i>	Read-only GL + subledger MCPs
<i>resolver</i> (Write-holder)	No	<i>Read, Write, Edit</i>	None

The *reader* returns length-capped, schema-validated JSON only (validated by *scripts/validate.py*). The *critic* independently re-verifies each break against trusted sources before the orchestrator hands the set to *resolver*. The *resolver* writes the exception report to *./out/*; it never opens an outsider file.

Handoff: to feed verified breaks into Month-End Closer, the orchestrator emits a *handoff_request* for *month-end-closer* in its final output; *scripts/orchestrate.py* (or your Temporal/Airflow worker) routes it as a new steering event. See the script for the allowlist + payload-validation pattern.

Not guaranteed: none of this writes to a system of record. Ledger adjustments require human approval outside the agent.

3.11 Steering Examples: gl-reconciler

JSON Summary

Item	Type	Summary

3.17 File: kyc-screener/README.md

KYC Screener — managed-agent template

Overview

Parses onboarding docs, runs the rules engine, screens sanctions/PEP, flags gaps. Same source as the [kyc-screener](#) Cowork plugin — this directory is the Managed Agent cookbook for *POST /v1/agents*.

Deploy

Structured Template

- export ANTHROPIC_API_KEY=sk-ant-...
- export SCREENING_MCP_URL=...
- ../../scripts/deploy-managed-agent.sh kyc-screener

Steering events

See [steering-examples.json](#).

Security & handoffs

Onboarding documents are untrusted. Three-tier isolation:

Tier	Touches untrusted docs?	Tools	Connectors
<i>doc-reader</i>	Yes	<i>Read, Grep</i> only	None
<i>rules-engine</i> / Orchestrator	No	<i>Read, Grep, Glob, Agent</i>	screening (read-only)
<i>escalator</i> (Write-holder)	No	<i>Read, Write, Edit</i>	None

doc-reader returns length-capped, schema-validated JSON. *escalator* produces *./out/escalation-.xlsx*.

Not guaranteed: this agent recommends a risk rating; the compliance officer decides.

3.18 Steering Examples: kyc-screener

JSON Summary

Item	Type	Summary

3.24 File: market-researcher/README.md

Market Researcher — managed-agent template

Overview

Sector or theme → industry overview → competitive landscape → peer comps → ideas shortlist → research note. Same source as the [market-researcher](#) Cowork plugin — this directory is the Managed Agent cookbook for *POST /v1/agents*.

Deploy

Structured Template

- export ANTHROPIC_API_KEY=sk-ant-...
- export CAPIQ_MCP_URL=... FACTSET_MCP_URL=...
- ../../scripts/deploy-managed-agent.sh market-researcher

Steering events

See [steering-examples.json](#). Kick from a research-queue event or fan out across a coverage map.

Security & handoffs

Third-party reports and issuer materials are untrusted. Three-tier isolation:

Tier	Touches untrusted docs?	Tools	Connectors
<i>sector-reader</i>	Yes	<i>Read, Grep</i> only	None
<i>comps-spreader</i> / Orchestra- tor	No	<i>Read, Grep, Glob, Agent</i>	CapIQ, FactSet (read-only)
<i>note-writer</i> (Write-holder)	No	<i>Read, Write, Edit</i>	None

sector-reader returns length-capped, schema-validated JSON. *note-writer* produces *./out/primer-.docx* (and *.pptx* if slides requested).

Handoff: to model a single name surfaced in the ideas shortlist, emit a *handoff_request* for *model-builder*; *scripts/orchestrate.py* routes it as a new steering event.

3.25 Steering Examples: market-researcher

JSON Summary

Item	Type	Summary

3.31 File: meeting-prep-agent/README.md

Meeting Prep Agent — managed-agent template

Overview

Briefing pack before every client meeting. Same source as the [meeting-prep-agent](#) Cowork plugin — this directory is the Managed Agent cookbook for *POST /v1/agents*.

Deploy

Structured Template

- export ANTHROPIC_API_KEY=sk-ant-...
- export CRM_MCP_URL=... CAPIQ_MCP_URL=...
- ../../scripts/deploy-managed-agent.sh meeting-prep-agent

Steering events

See [steering-examples.json](#). Typically kicked from a calendar event by your workflow engine.

Security & handoffs

Client-provided documents and inbound emails are untrusted. Three-tier split:

Tier	Touches untrusted docs?	Tools	Connectors
<i>profiler</i>	No	<i>Read, Grep</i>	CRM, CapIQ (read-only)
<i>news-reader</i>	Yes	<i>Read, Grep</i> only	None

pack-writer produces `./out/briefing-.pptx`; it never opens client-provided content directly.

Not guaranteed: this pack is for the advisor, not the client. No client-facing send.

3.32 Steering Examples: meeting-prep-agent

3.38 File: model-builder/README.md

Model Builder — managed-agent template

Overview

DCF, LBO, 3-statement, comps — built as a file artifact. Same source as the [model-builder](#) Cowork plugin — this directory is the Managed Agent cookbook for *POST /v1/agents*.

Deploy

Structured Template

- export ANTHROPIC_API_KEY=sk-ant-...
- export CAPIQ_MCP_URL=... DALOOPA_MCP_URL=...
- ../../scripts/deploy-managed-agent.sh model-builder

Steering events

See [steering-examples.json](#).

Security & handoffs

Task-decomposition split — inputs come from trusted MCPs, so the split is about artifact isolation and re-verification. Exactly one worker holds *Write*:

Leaf	Tools	Connectors
<i>data-puller</i>	<i>Read, Grep</i>	CapIQ, Daloopa (read-only)
<i>builder</i> (Write-holder)	<i>Read, Write, Edit, Bash</i> (sandboxed)	None
<i>auditor</i>	<i>Read, Grep</i>	None

auditor re-checks ties and balances after *builder* writes `./out/model.xlsx`.

Handoff: when invoked from *earnings-reviewer* or *pitch-agent*, the calling agent’s *handoff_request* is routed here by `scripts/orchestrate.py`.

3.39 Steering Examples: model-builder

3.45 File: month-end-closer/README.md

Month-End Closer — managed-agent template

Overview

Accruals, roll-forwards, variance commentary. Same source as the [month-end-closer](#) Cowork plugin — this directory is the Managed Agent cookbook for *POST /v1/agents*.

Deploy

Structured Template

- export ANTHROPIC_API_KEY=sk-ant-...
- export GL_MCP_URL=...
- ../../scripts/deploy-managed-agent.sh month-end-closer

Steering events

See [steering-examples.json](#).

Security & handoffs

Supporting invoices and vendor statements are untrusted. Three-tier isolation:

Tier	Touches untrusted docs?	Tools	Connectors
<i>ledger-reader</i>	Yes	<i>Read, Grep</i> only	None
<i>rollforward</i> / Orchestrator	No	<i>Read, Grep, Glob, Agent</i>	internal-gl (read-only)
<i>poster</i> (Write-holder)	No	<i>Read, Write, Edit</i>	None

poster produces *./out/close-package-.xlsx*. JE drafts are staged, not posted to the GL.

Handoff: receives *handoff_request* events from *gl-reconciler* with verified breaks to fold into close commentary.

3.46 Steering Examples: month-end-closer

3.52 File: pitch-agent/README.md

Pitch Agent — managed-agent template

Overview

Comps, precedents, LBO → branded pitch deck, end to end. Same source as the [pitch-agent](#) Cowork plugin — this directory is the Managed Agent cookbook for *POST /v1/agents*.

Deploy

Structured Template

- export ANTHROPIC_API_KEY=sk-ant-...
- export CAPIQ_MCP_URL=... DALOOPA_MCP_URL=...
- ../../scripts/deploy-managed-agent.sh pitch-agent

Steering events

See [steering-examples.json](#).

Security & handoffs

Task-decomposition split — less about untrusted inputs (data comes from CapIQ/Daloopa MCPs), more about parallelism and artifact isolation. Exactly one worker holds *Write*:

Leaf	Tools	Connectors
<i>researcher</i>	<i>Read, Grep</i>	CapIQ, Daloopa (read-only)
<i>modeler</i>	<i>Read, Bash</i> (sandboxed)	CapIQ, Daloopa (read-only)
deck-writer (Write-holder)	<i>Read, Write, Edit</i>	None

Artifacts land in *./out/pitch-.pptx* and *./out/model.xlsx* via *pptx-author* / *xlsx-author*.

Handoff: to rebuild the model after a thesis change, the orchestrator emits a *handoff_request* for *model-builder*; *scripts/orchestrate.py* (or your workflow engine) routes it as a new steering event. See the script for the allowlist + payload-validation pattern.

3.57 Directory: README.md

3.58 File: README.md

Managed-agent templates for financial services

Every agent in this repo ships **two ways**: as a Cowork plugin your analysts install today (see the vertical directories at repo root), and as a Claude Managed Agent template your platform team deploys behind your own workflow engine. **Same agent, same skills — pick your surface.** Each directory below is a deploy manifest that references the canonical system prompt and skills from the matching plugin, so there is one source of truth.

Run `../scripts/deploy-managed-agent.sh` to upload skills, create leaf workers, and `POST /v1/agents` with the resolved config. Each template ships with [steering-examples.json](#) and a per-agent README covering its security tier and handoffs.

Agent	Vertical plugin	Cowork tile	CMA steering event	Leaf workers
pitch-agent	investment-banking	Comps, precedents, LBO → branded pitch deck	<i>Build pitch book: / , thesis:</i>	researcher · modeler · deck-writer
market-researcher	equity-research	Sector or theme → overview, landscape, peer comps, ideas shortlist	<i>Primer: , angle:</i>	sector-reader · comps-spreader · note-writer
earnings-reviewer	equity-research	Earnings call + filings → model update → note draft	<i>Process earnings:</i>	transcript-reader · model-updater · note-writer
meeting-prep-agent	wealth-management	Briefing pack before every client meeting	<i>Briefing pack for , meeting</i>	profiler · news-reader · pack-writer
model-builder	financial-analysis	DCF, LBO, 3-statement, comps — as a file	<i>'Build <dcf\ lbo\</i>	3-stmt> for , assumptions: {...}' data-puller · builder · auditor
gl-reconciler	financial-analysis	Finds breaks, traces root cause, routes for sign-off	<i>Reconcile GL vs subledger, trade date , classes:</i>	reader · critic · resolver
kyc-screener	financial-analysis	Parses onboarding docs, runs rules, flags gaps	<i>Screen onboarding packet</i>	doc-reader · rules-engine · escalator
valuation-reviewer	private-equity	Ingests GP packages, runs valuation, stages LP reporting	<i>Review portco valuations for fund as of</i>	package-reader · valuation-runner · publisher

<i>month-end-closer</i>	financial-analysis	Accruals, roll-forwards, variance commentary	<i>Close for period</i>	ledger-reader · rollforward · poster
<i>statement-auditor</i>	private-equity	Audits LP statements before distribution	<i>Tie out statement batch against NAV pack</i>	statement-reader · reconciler · flagger

Bold leaf = the only worker with *Write*.

Manifest vs API

The *agent.yaml* files use the real *POST /v1/agents* field names with a few conveniences the deploy script resolves:

Manifest convention	Resolves to
<i>system: {file: ../ ../ plugins/ agent-plugins/ / agents/ .md, append: "..."} }</i>	<i>system: ""</i>
<i>system: {text: "..."} }</i>	<i>system: ""</i>
<i>skills: [{from_plugin: ../ ../ plugins/ agent-plugins/ }] }</i>	uploads every <i>skills/ *</i> under that dir → <i>[{type: custom, skill_id: ...}, ...]</i>
<i>skills: [{path: ../ ../ ...}] }</i>	<i>skills: [{type: custom, skill_id: }] }</i>
<i>callable_agents: [{manifest: ./ subagents/ x.yaml}] }</i>	<i>callable_agents: [{type: agent, id: , version: latest}] }</i>

“**Research preview:** *callable_agents* (multi-agent delegation) supports **one delegation level**. An orchestrator can call workers; workers cannot call further subagents.”

Cross-agent handoffs

Named agents never call each other directly. When one agent needs another, it emits a *handoff_request* in its output; *./scripts/orchestrate.py* (or your Temporal/Airflow/Guidewire event bus) routes it as a new steering event to the target session. The reference script hard-allowlists targets and schema-validates payloads — see its header comment for the threat model.

3.61 File: statement-auditor/README.md

Statement Auditor — managed-agent template

Overview

Audits pre-generated LP statements before distribution. Same source as the [statement-auditor](#) Cowork plugin — this directory is the Managed Agent cookbook for *POST /v1/agents*.

Deploy

Structured Template

- export ANTHROPIC_API_KEY=sk-ant-...
- export NAV_MCP_URL=...
- ../../scripts/deploy-managed-agent.sh statement-auditor

Steering events

See [steering-examples.json](#).

Security & handoffs

Generated statements are treated as untrusted (upstream system out of scope). Three-tier isolation:

Tier	Touches untrusted docs?	Tools	Connectors
<i>statement-reader</i>	Yes	<i>Read, Grep</i> only	None
<i>reconciler</i> / Orchestrator	No	<i>Read, Grep, Glob, Agent</i>	nav (read-only)
<i>flagger</i> (Write-holder)	No	<i>Read, Write, Edit</i>	None

flagger produces *./out/signoff.xlsx*.

Not guaranteed: this agent recommends pass/hold; IR distributes after human sign-off.

3.68 File: valuation-reviewer/README.md

Valuation Reviewer — managed-agent template

Overview

Ingests GP packages, runs valuation template, stages LP reporting. Same source as the [valuation-reviewer](#) Cowork plugin — this directory is the Managed Agent cookbook for *POST /v1/agents*.

Deploy

Structured Template

- export ANTHROPIC_API_KEY=sk-ant-...
- export PORTFOLIO_MCP_URL=...
- ../../scripts/deploy-managed-agent.sh valuation-reviewer

Steering events

See [steering-examples.json](#).

Security & handoffs

GP-provided valuation packages are untrusted. Three-tier isolation:

Tier	Touches untrusted docs?	Tools	Connectors
<i>package-reader</i>	Yes	<i>Read, Grep</i> only	None
<i>valuation-runner</i> / Orchestra- tor	No	<i>Read, Grep, Glob, Agent</i>	portfolio (read-only)
<i>publisher</i> (Write-holder)	No	<i>Read, Write, Edit</i>	None

package-reader returns length-capped, schema-validated JSON. *publisher* produces *./out/lp-pack.xlsx*.

Handoff: to feed flagged portcos into GL Reconciler, emit a *handoff_request* for *gl-reconciler*; *scripts/orchestrate.py* routes it.

Not guaranteed: LP reports require IR and CCO sign-off outside this agent.

3.69 Steering Examples: valuation-reviewer
